

Installation Instructions

1. Cut seal to fit.
2. Drill head piece for mounting screws, avoiding the area where the closer shoe will be located.
3. With door closed, position seal with the gasketing slightly compressed against the door.
4. Install with screws provided, working from one end to the other.

NOTE: Install seals before the closer. Seals installed at head will require the closer body be installed 1/4" lower on the door.
